

PROJECT TITLE :

STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

TEAM NUMBER: 7

TEAM MEMBERS:

- * G. PAVITHRA (HEAD)
- * V. NIKILA
- * V. VARSHINI
- * M. MONIKASRI

1. Introduction

This project demonstrates an automated IT procurement process in ServiceNow for a Standard Laptop service request. The workflow uses Flow Designer to create a Catalog Task after the service request reaches the required approval state. The generated task is configured with the short description, description, assignment group, and approval information.

2. Project Objective

- * Create a Flow Designer flow for the Standard Laptop request.
- * Use the Service Catalog as the trigger for the flow.
- * Create a Catalog Task automatically from the requested item.
- * Set the task information for laptop configuration.
- * Assign the task to the Hardware assignment group.
- * Connect the flow to the Standard Laptop catalog item.
- * Place a Standard Laptop order and verify the resulting Catalog Task.

3. Technology Used

Technology / Feature	Usage in Project
----------------------	------------------

---	---
-----	-----

ServiceNow	Platform used to configure and test the procurement workflow.
------------	---

Flow Designer	Creates the automated flow.
---------------	-----------------------------

Service Catalog	Provides the Standard Laptop request.
-----------------	---------------------------------------

Create Catalog Task	Automatically creates the task after the flow is triggered.
---------------------	---

Catalog Item / Maintain Items	Used to assign the flow to the Standard Laptop item.
-------------------------------	--

4. Project Workflow

The overall process shown in the project instructions is:

- * User opens the Service Catalog.
- * User selects Hardware and the Standard Laptop item.
- * User places the order using Order Now.
- * The request reaches the approval section.
- * The request is approved.
- * The Service Catalog trigger starts the Standard Laptop Task flow.
- * The flow creates a Catalog Task from the Requested Item Record.
- * The task receives the laptop configuration description and Hardware assignment group.
- * The final Catalog Task record can be opened to verify the updated information.

5. Milestone 1 – Create the Flow

5.1 Create Flow

- * Open ServiceNow.
- * Select All and search for Flow Designer.
- * Open Flow Designer under Process Automation.
- * Select New and choose Flow.
- * Enter the Flow Name as “Standard laptop task”.
- * Set Application to Global.
- * Set Run as to “System user”.
- * Submit the flow.

5.2 Configure the Trigger

- * Click Add a trigger.
- * Search for and select “Service Catalog”.
- * Click Done.

5.3 Configure the Action

- * Under Actions, click Add an action.
- * Search for and select “Create Catalog Task”.
- * For the Requested Item, use the Requested Item Record from the trigger.
- * The table is populated as a Catalog Task.
- * Set the short description as “Laptop need to Configured”.
- * Add the Description field with the value “Laptop need to Configured”.

- * Set Assignment group to “Hardware”.
- * Set Approval to “Approved”.
- * Leave the remaining values as default and click Done.
- * Save the flow.
- * Activate the flow and confirm activation.

6. Milestone 2 – Assign the Flow to the Standard Laptop Catalog Item

- * Open ServiceNow.
- * Use All and search for Maintain Items.
- * Select Maintain Items.
- * Search the Name field for “Standard Laptop” and open that record.
- * Open the Process Engine section.
- * Remove the remaining automation entries and add Flow.
- * Select the flow named “Standard Laptop Task”.
- * Save the catalog item record.

7. Milestone 3 – Place the Service Catalog Order and Verify Approval

- * Select All and search for Service Catalog.
- * Open Service Catalog and select Hardware.
- * Find and open Standard Laptop.
- * Click Order Now to place the request.
- * View the Order Status and click the Request Number.
- * Open the Requested record.
- * Scroll to the Approvers section.
- * Use the approval record and select Approve.
- * Open the Requested Item section and open the Requested Item record.
- * Scroll to the Catalog Tasks section.
- * Open the Catalog Task record to verify the updated status, short description, and assignment group.

8. Expected Final Result

After the request is approved and the flow runs, a Catalog Task is created for the Requested Item. The task contains the configured laptop-related short description and is assigned to the Hardware group. The final Catalog Task record displays the task details and request relationship.

9. Key Configuration Values

Field	Value
Flow Name	Standard laptop task
Application	Global
Run as	System user
Trigger	Service Catalog
Action	Create Catalog Task
Short Description	Laptop need to Configured
Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved
Catalog Item	Standard Laptop

10. Conclusion

By automating the Standard Laptop procurement process with ServiceNow Flow Designer, the project reduces the manual steps required to create and assign a laptop configuration task. The workflow connects the Service Catalog request, approval, and Catalog Task creation into a single process. This provides a structured procurement workflow in which the resulting task is assigned to the Hardware group for further action.

11. Project Summary for Presentation / Viva

> “My project is Streamlining IT Procurement by automating Standard Laptop orders using ServiceNow Flow Designer. When a user places a Standard Laptop request through the Service Catalog, the request goes through approval. After approval, the flow creates a Catalog Task automatically. The task contains the laptop configuration description and is assigned to the Hardware group. This demonstrates how Flow Designer can automate a ServiceNow procurement workflow.”
